

How to protect corporate information from insiders and new threats – Advantages of behavior control approach

Michael Kalinichenko
CEO
S.N.Safe&Software

Most dangerous internal IT security threats in international markets

- Data theft
- Malevolent staff and hackers activity (data damage/loss)
- Incorrect actions of novice users

These are 80% of threats

Factors which cause internal and external threats growth

- Price of information growth
- Insiders act inside perimeter of physical and electronic protection
- Specially made to order spyware developed for targeted attacks
- Low company loyalty of employees at emergency markets (Asia, Middle East, etc.)
- People do not like limitations forced by security officers
- Growth of legal and reputation risks

Benefits of behavior control technology

- If you control operations of other software you control computer system of the company
- There are only few methods of making damage to computer and millions of their implementations
- People work through software, if you control software you control people (hackers, insiders, etc.)

Safe'n'Sec® products provide companies' networks protection from external and internal attacks

- Attacks with mass malicious codes usage
- Information theft
- Specialized malware and intrusion methods usage

Blocking the majority of potentially dangerous actions Safe'n'Sec solutions efficiently supplement already installed antiviruses and firewalls

Main Safe'n'Sec abilities

- To block actions that can be dangerous no matter of the action source
- To determine abnormal activities of hundreds of popular application (for example Internet Explorer)
- To control access of applications to files and operations with them
- To create corporate specific behavior control rules by special editor
- To hide files with important data from unknown applications

Safe'n'Sec Business - best solution for security of your business!

- **Safe'n'Sec Business** allows:
- Remote installation and versions updating
- Getting reports from users workstations
- Starting system administrator console from any workstation
- Configurations' group setting execution

Safe'n'Sec Enterprise – easily administrated protection of large enterprises networks!

- Service centers provide:
 - *Remote installation and setting of client modules installed on network workstations*
 - *Automatic client modules updating via Internet*
 - *General settings and tasks for groups of workstations*
- Extended user rights management including customized rules for data access and modifications (limitation of access to drives and folders)
- Extended group policies' setting including notebooks

Safe'n'Sec Timing – monitoring of access to confidential information

- Software usage control
- Logging of file operations
- Option of automatically making screenshots under critical events
- Databases support for storage of confidential data management history
- Is able to monitor any set of corporate software

Advantages of Safe'n'Sec corporate solutions

- Close to 100% efficiency of protection from known as well as newly appearing threats
- Control of confidential data access
- User activity control in corporate network in case of confidential information access
- Minimum system resources consumption (no more than 2% without AV kernel)
- Ability to control users behavior according to security policies
- Low cost of ownership
